Claim 14 (withdrawn)

Claim 15. (new) A baby bottle holder for use with baby clothing comprising:

- a grip formed from a rectangular-shaped element, said grip with a front surface, a back surface, a first surface, a second surface, an upper surface and a bottom surface, formed with a concavity extending between said first and second surfaces and between said front surface to the back surface, said concavity defining a lip in the upper surface of said grip for securing a portion of the outer surface of a baby bottle;
- a removable attachment mechanism for securing said grip to the baby clothing.

Claim 16. (new). The baby bottle holder of Claim 15 wherein said grip is comprised of closed cell foam.

Claim 17. (new) A baby bottle holder for use with baby clothing comprising:

- a grip formed from a rectangular-shaped element, said grip with a front surface, a back surface, a first surface, a second surface, an upper surface and a bottom surface, the upper surface forming a concavity extending between said first and second surfaces and between said front surface to the back surface, said grip including means for securing the baby bottle;

- a removable attachment mechanism for securing said grip to the baby clothing.

Claim 18. (new) The baby bottle holder according to claim 15 further comprising a plurality of straps with a first end and a second end, the second end having a fastening mechanism, the first end of at least one strap is attached to the first surface, the first end of the second strap is attached to the first surface, the second end is releasably attached to the second surface.

Claim 19. (new) The baby bottle holder according to claim 15 wherein the cross sectional shape of the concavity being selected from the group consisting of a V-shape, U-shape, a rectilinear shape, an open top oval shape, an open top circle shape or an open top heart shape.

Claim 20. (new) The baby bottle holder according to claim 15 wherein the concavity removeably engages the outer surface of a baby bottle.

Claim 21.(new) The baby bottle holder according to claim 15 wherein the concavity is inclined relative to the bottom surface.

Claim 22. (new) The baby bottle holder according to claim 15 wherein the attachment mechanism includes a hook and loop material.
